

Preserving memories, honoring angels

Tiny Treasures Tribute

Every child's life leaves a lasting imprint on the hearts of those who love them.

For families experiencing the loss of a child, the 3D Printing and Training Center at Clarkson College offers a compassionate way to preserve precious memories through beautifully crafted memorial keepsakes.

Using molds provided by the family, hand and/or foot impressions are transformed into highly detailed resin models.

Customized creations

Each memorial keepsake is carefully created from a hospital-provided mold, preserving the unique details of the child.

Personalized experience

By providing a supportive and understanding environment, the 3D Center team guides hospital personnel through the process with empathy and sensitivity.

Quality and precision

The keepsakes are created with exceptional accuracy and care by using professional 3D scanning equipment and advanced resin printing technology.

Lasting remembrance

The completed keepsakes bring comfort to family members during the grieving process.

3 easy steps

Tiny Treasures Tribute

1

Mold submission

A family member provides a completed hand and/or foot mold to the 3D Printing and Training Center. Each mold is then assigned a unique identifier to ensure accurate tracking throughout the creation process. Every mold is handled with the utmost care.

2

3D mold scanning

Using advanced 3D scanning technology, the mold is digitally captured to create a precise three-dimensional model. This process preserves intricate details while creating an accurate digital representation of the original mold.

3

Production and delivery

The digital model is transformed into a detailed keepsake using professional 3D printing technology. Each Tiny Treasure is carefully inspected and packaged before being returned to the family, along with the original plaster mold.

Our goal with each Tiny Treasure is to provide a lasting tribute that cherishes a life and preserves precious memories.
